

# Tamarack Subdivision Sound Wall

*Aurora, Illinois*

*“This precast system separated us from our competitors and helped us sell out the development. We would recommend PCI certified producers to any developers looking to incorporate precast into their projects.”*

~ Joe Imbrunone  
Project Engineer

This custom sound wall features textured rock facing on both sides. Precast was chosen because of its aesthetic value, longevity and overall appearance was considered to be superior to any other product by the owners. Additionally, the precast sound wall fit within the budget of the development.
